Microsoft Intune Part 2

Compliance & Conditional Access

Compliance means conforming to a set of predefined rules, laws, standards, or demands

What is the Compliance

Real World Problem Scenarios

Configuration Profiles

Configure and enforce device settings in Intune

Purpose

Define device settings and apply them to devices (e.g., security, system, and feature configurations).

Examples

- Enable Windows Firewall
- Configure BitLocker
- Configure password and lock screen
- Set Microsoft Defender settings
- Configure Wi-Fi or VPN

Compliance Policies

Evaluate whether devices meet your security requirements

Purpose

Define security requirements and check if devices are compliant with them.

Examples

- Require a minimum OS version
- Require Windows Firewall to be enabled
- Require BitLocker encryption
- Require Secure Boot and TPM (where supported)
- Define password / PIN requirements

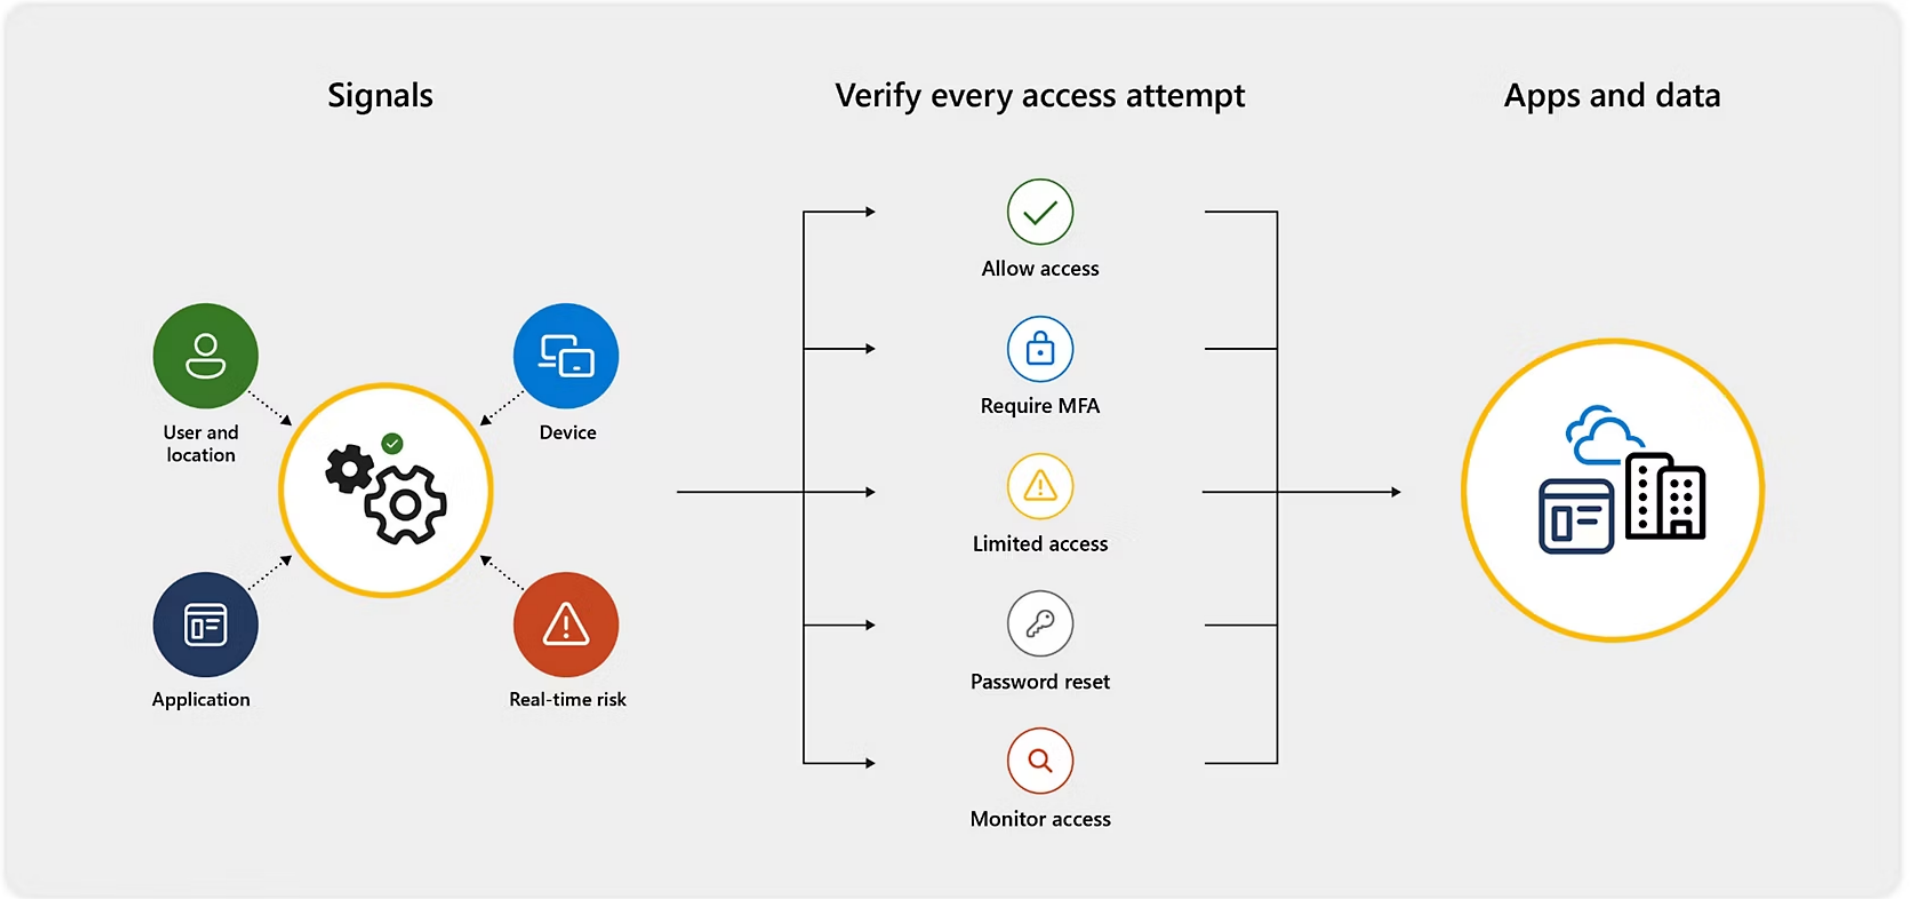

Key Takeaway: Configuration Profiles configure settings on devices, while Compliance Policies evaluate whether those devices meet your security requirements.

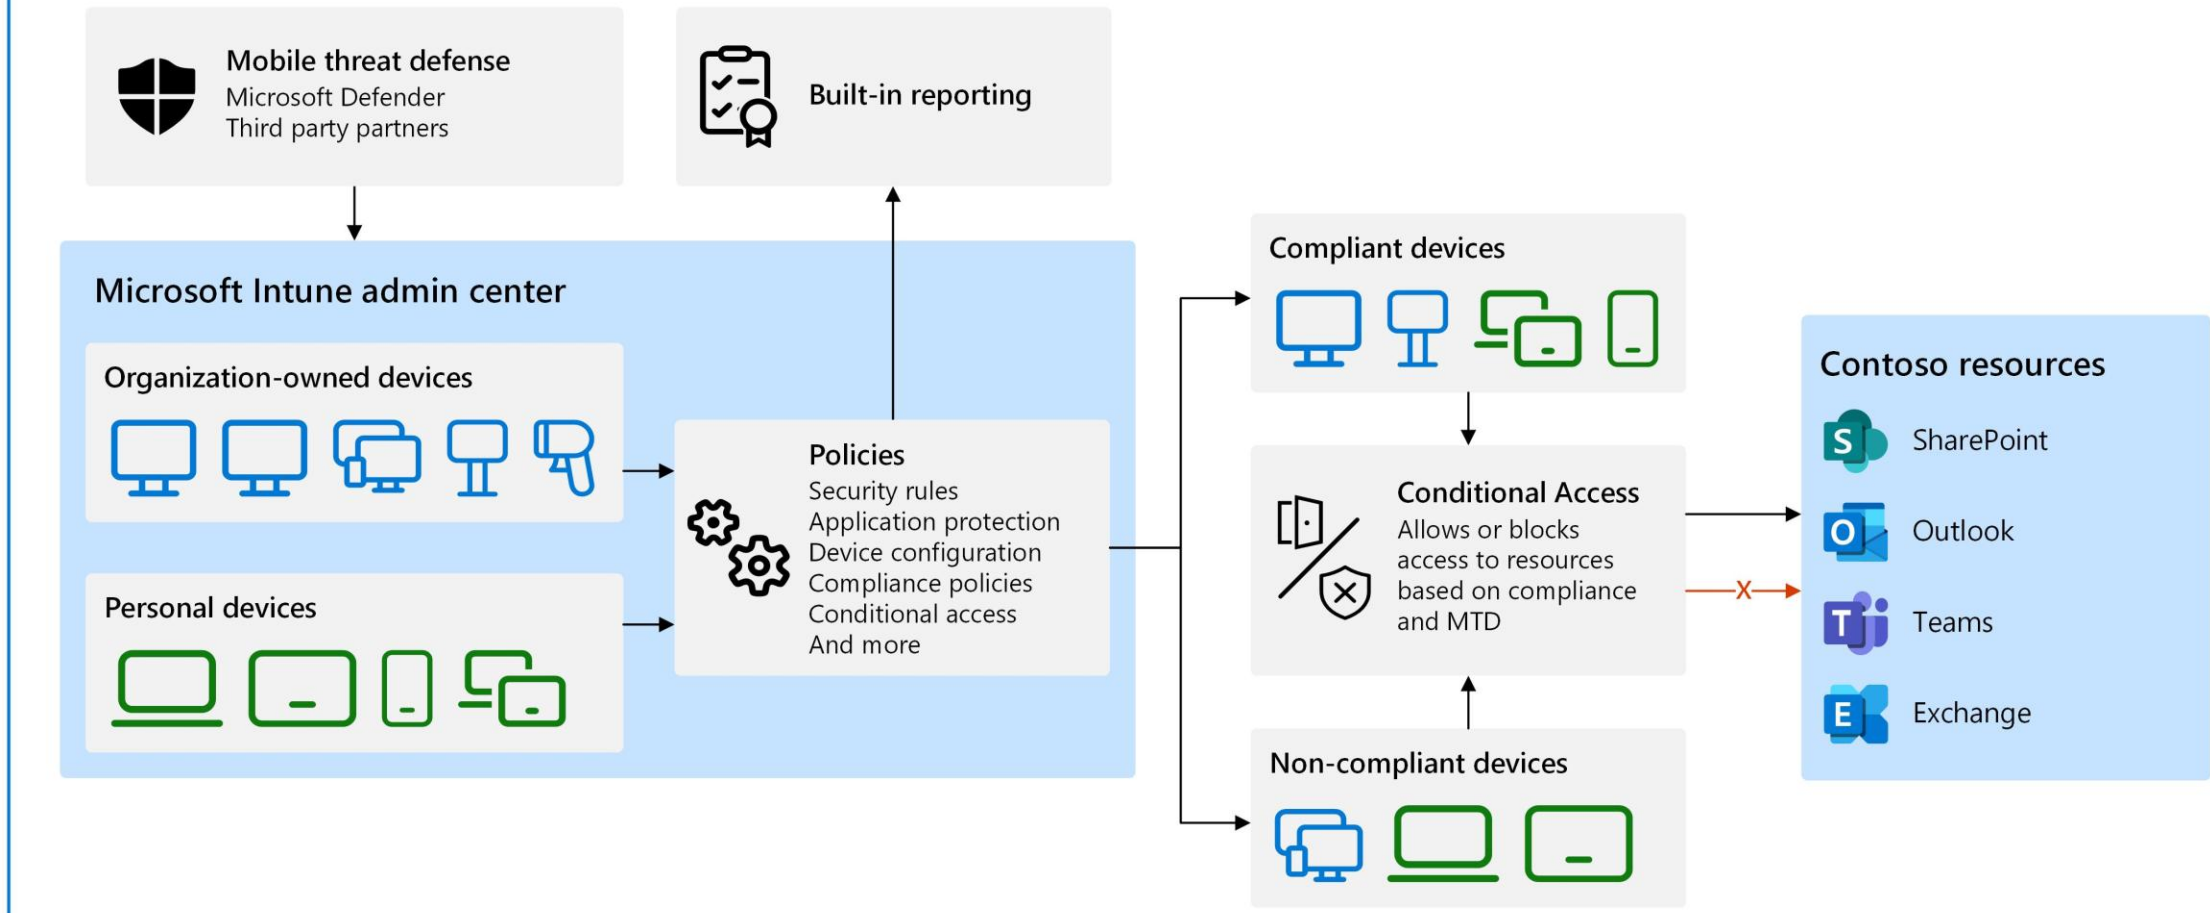

Configuration Profiles VS Compliance Policies.

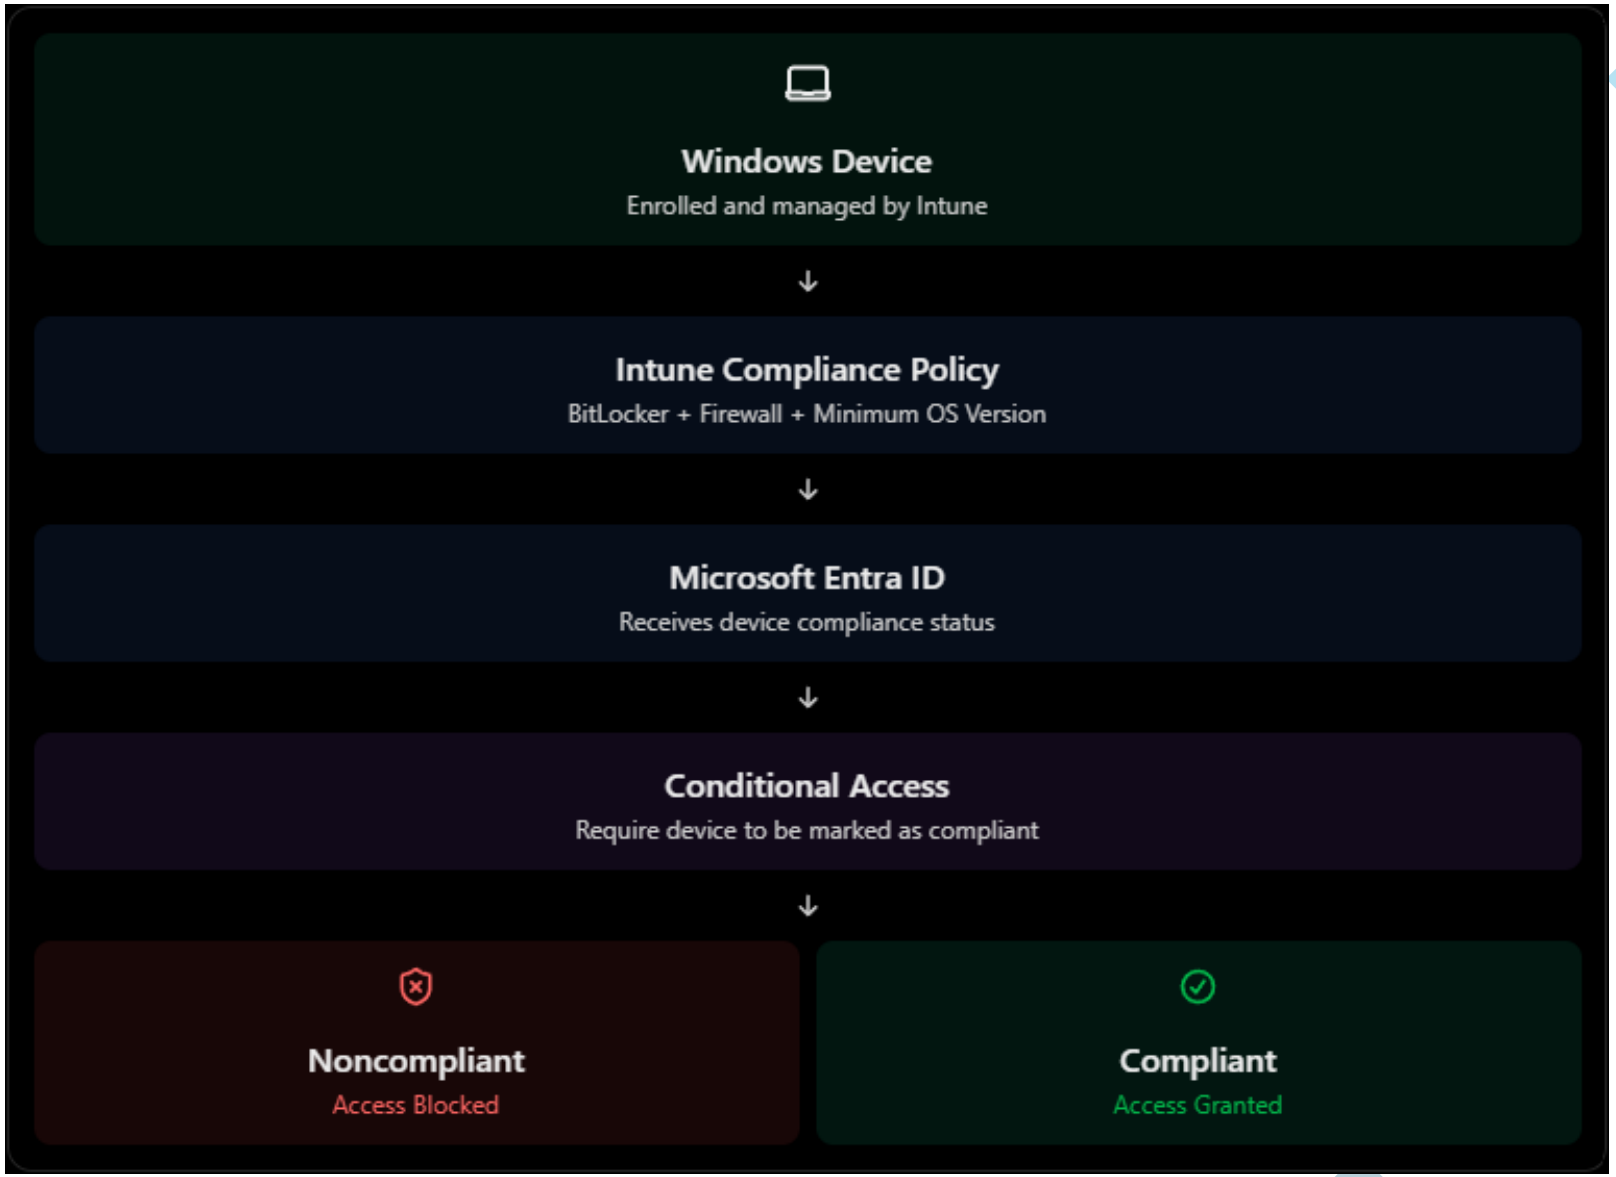

Feature	Configuration Profile	Compliance Policy
Purpose	Apply device settings	Evaluate device compliance
Action	Configure	Evaluate
Does it change device settings?	Yes	No, not directly
Determines Compliance Status?	No	Yes
BitLocker	Enable and configure encryption	Verify encryption status
Firewall	Configure Firewall settings	Verify Firewall status
Conditional Access	No direct integration	Provides Compliance Status for CA
Remediation	Apply required configurations	Identify noncompliant devices and trigger remediation actions

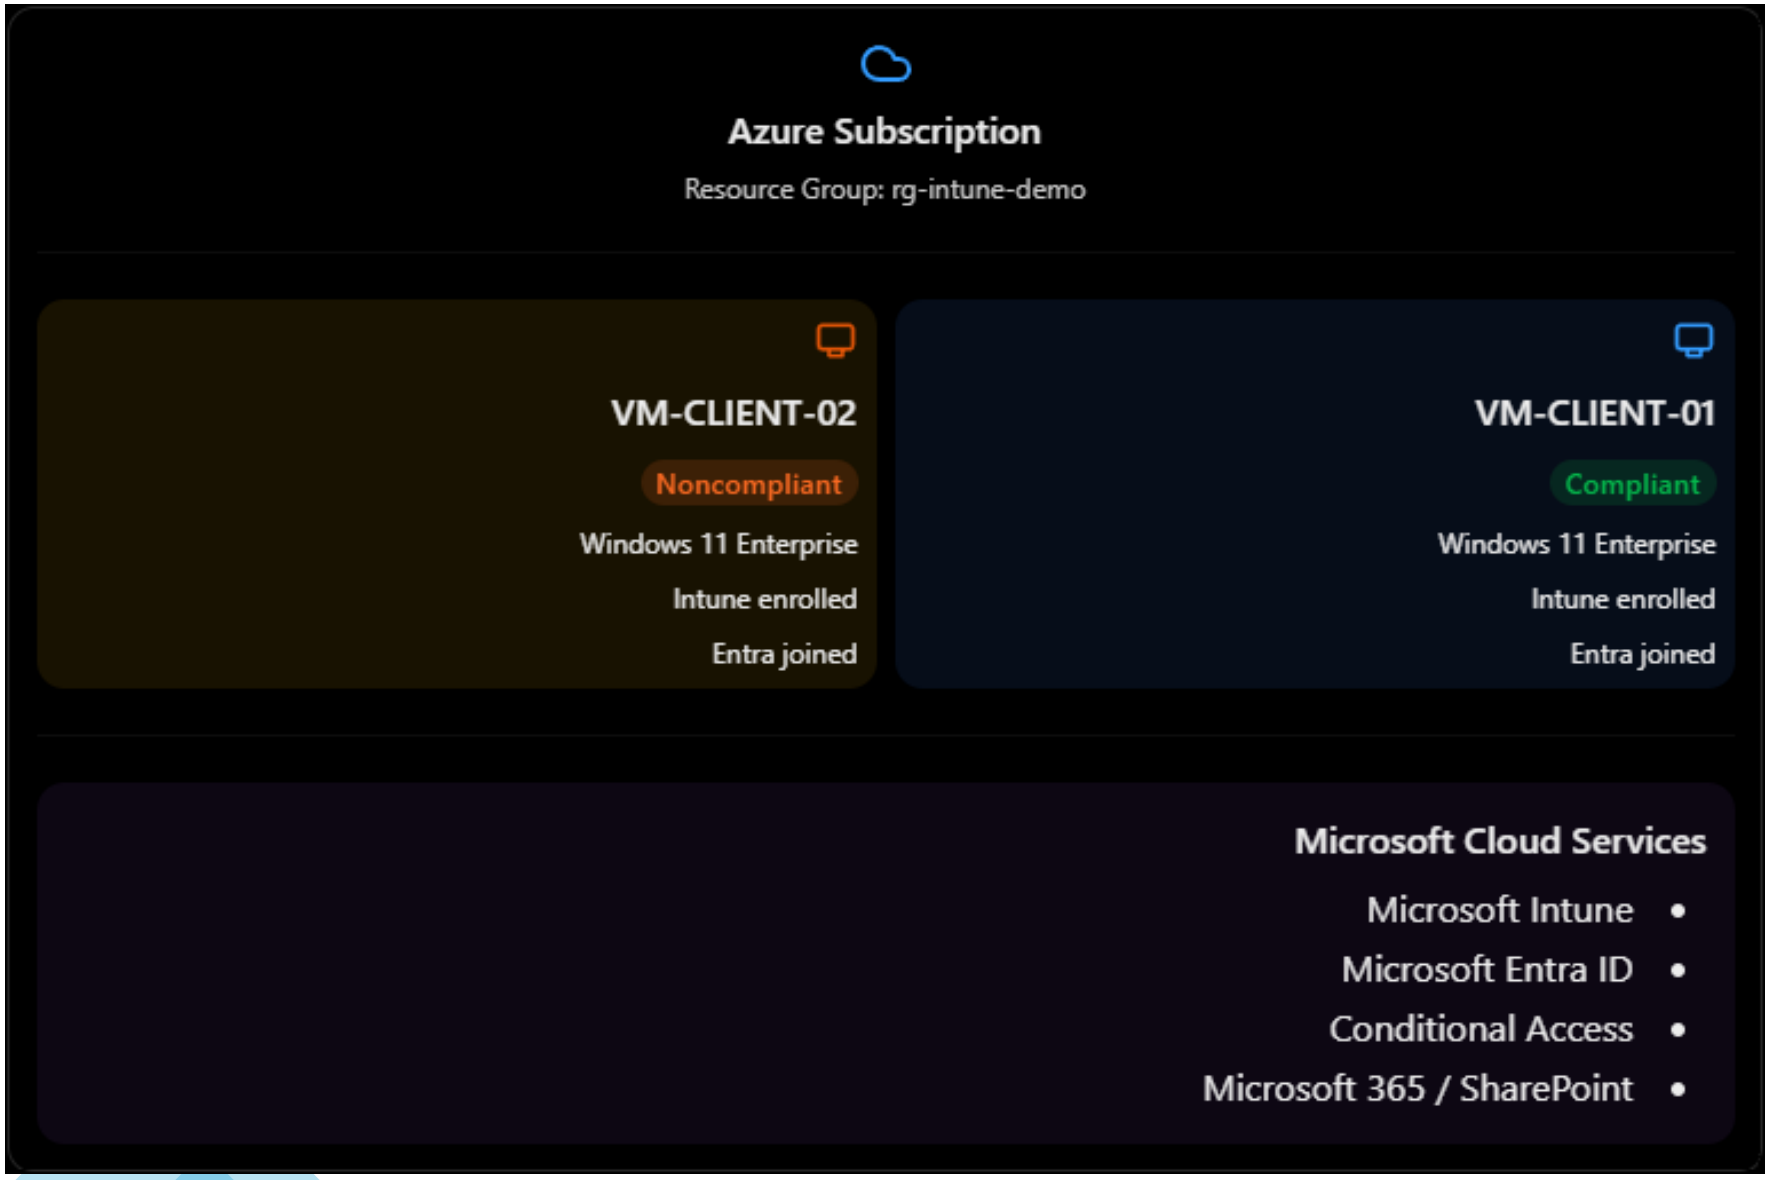

Conditional Access

Microsoft Intune

Windows Device
Enrolled and managed by Intune
Intune Compliance Policy
BitLocker + Firewall + Minimum OS Version
Microsoft Entra ID
Receives device compliance status
Conditional Access
Require device to be marked as compliant
Noncompliant
Access Blocked
Compliant
Access Granted

Azure Subscription
Resource Group: rg-intune-demo
VM-CLIENT-02
Noncompliant
Windows 11 Enterprise
Intune enrolled
Entra joined
VM-CLIENT-01
Compliant
Windows 11 Enterprise
Intune enrolled
Entra joined
Microsoft Cloud Services
Microsoft Intune
Microsoft Entra ID
Conditional Access
Microsoft 365 / SharePoint

emadadel2008/intune-compliance-lab

Lab steps

1. Step 1: Prepare your workstation
2. Step 2: Deploy the Azure VMs
3. Step 3: Enrol both VMs in Intune
4. Step 4: Create the compliance policy
5. Step 5: Make CLIENT-02 noncompliant
6. Step 6: Test Conditional Access (optional)
7. Step 7: Restore and clean up
